

CL3300 Cylindrical Locks

Princeton (PZD) Lever Redesign

Corbin Russwin Announces a Redesign of the Princeton (PZD) Lever For Use With CL3300 Cylindrical Locks

Corbin Russwin is pleased to announce a redesign of the Princeton lever for use with ANSI/BHMA Grade 1 CL3300 cylindrical locks. The redesigned Princeton lever is made from the same solid die cast zinc as the current Princeton lever, and can retrofit to existing CL3300 cylindrical lock installations.

A distinct advantage of the redesigned Princeton lever is that it looks the same as the Corbin Russwin ANSI/BHMA Grade 1 CL3500 and Grade 2 CL3800 Princeton lever. Buildings can have a consistent design aesthetic from a main entrance to an office to a stairwell without compromising the security needs of each door opening.

Benefits of the Redesigned Princeton Lever:

- A more comfortable grip than the current lever
- Same look as the CL3500 and CL3800 Princeton Lever design
- Retrofits to existing CL3300 cylindrical lock installations

Current

Redesign

What to look for:

- The packaging containing redesigned hardware will be marked on the outside with a red sticker, to ease inventory changeover.

When to look for it:

- The redesigned CL3300 Princeton (PZD) lever will begin shipping by January 2010.
- Redesigned CL3300 Princeton (PZD) levers will be phased in.
- The redesigned and current Princeton levers will not be mixed on orders.

The part numbers for the redesigned Princeton lever and an example of how to order are on the next page.
